

CONNECTING THE CURRICULUM TO CAREERS WITHIN THE BUILT ENVIRONMENT

My Environment My Future (MEMF) is a free schools programme which embeds knowledge, resources and guidance on careers within the built environment directly into the delivery of the GCSE and A-level geography curriculum.

MEMF, created in collaboration between teachers and industry professionals, meets the specifications for all major UK awarding bodies and includes lesson plans, PowerPoint presentations, worksheets, and industry curated resources to complement the delivery of the curriculum.

Alongside the curriculum, the programme also supports site visits, career talks with industry professionals and a nationwide competition challenging students to design and present practical actions to improve their local urban environments.

NEW OPPORTUNITIES

Originally created by the CSTT, the mission from the very beginning was to inspire young people about the exciting careers available in the built environment, whilst supporting teachers to deliver the best educational experience for all their students without demanding any additional time, money or resources.

Since launching in May 2020, the programme has grown beyond our expectations with over 260 teachers engaged, support from five influential organisations within the sector and a growing number of companies working in the built environment. Following on from this success, it was the right time to create a dedicated website to allow the programme to continue to grow, develop and facilitate future collaborations.

Our ambition is that MEMF will be adopted and collectively owned by the sector and used as a tool to support both the sector's social impact and most importantly the young people looking to enter the sector.

"INSPIRING YOUNG PEOPLE WHILST SUPPORTING TEACHERS"

CREATING A LASTING IMPACT

A career in the built environment offers the opportunity to transform the world around you and truly make a difference to the lives of communities and the environment. With a wide range of varied, well paid and rewarding careers, most students miss out on these opportunities due to a lack of awareness and access to the pathways into these careers. The built environment is currently facing a skill shortage, an ageing workforce and predicts it will need hundreds of thousands of new jobs over the next decade.

We now have an opportunity, through MEMF, to shape the future of the sector and consequently our society, by empowering student to learn about and consider this sector as a career option thus generating a pipeline of talent for the future workforce. Our ambition is for the Built Environment, where we all live, work and relax, to be shaped and created by individuals who represent all parts of our society.

HOW TO GET INVOLVED

To access the MEMF school programme for free, register on the MEMF website and download the programme. It's that simple! Please share this document with colleagues, friends and your school. The programme is open to everyone!

We are always looking for future collaborations and partnerships; whether it is providing resources or guidance to include in the programme, making MEMF a part of your section 106 or social impact or perhaps you would like to shape the future of the programme. For all these enquiries, please contact us via email or our contact us page.
