

# Worksheet 3

## Speechwriting: Researching and Planning

### Task:

Refer to your ordered case studies. Write the case studies in order in the first column and fill out the rest of the worksheet using the success criteria below:

You must:

1. State what the main problem might be for the people in your case study.
2. Find evidence to support your claim. Only use information from the case study
3. Summarise the impact the rise in energy prices will have on that person's life and the people they might interact with
4. Write 2-3 concluding sentences about why energy prices should be capped for that particular person

Case Study and person	Main problem	Evidence to support	Impact of energy prices	Why should energy prices be capped for that person?

## Extension – Energy Cap

The energy price cap was introduced in 2019 by energy regulator Ofgem to prevent service providers from making excessive profits from customers. Essentially, the cap is there to stop energy suppliers from charging any prices they like per kWh of energy used, while also taking into account the real wholesale energy price. This prevents suppliers from purchasing energy at a higher price than they are selling and is meant to ensure a “fair” price for all. It doesn't cap the person's total bill, which will change depending on how much energy is used.
