

# Worksheet 2

Job role	Would this be a suitable job?	Why would this be a suitable job?	How would knowledge of statistics help in this job?
<p><b>Insurance underwriters</b> analyse risk in insurance proposals, determine policy terms and calculate premiums on the basis of actuarial, statistical and background information.</p>			
<p><b>Cost estimators</b> gather and analyse data to estimate the amount of money, time, materials, and labour required to complete a construction project, provide a service, or manufacture a product.</p>			

# Worksheet 2

**Meteorologists** study the Earth's atmosphere – particularly climate and weather – in order to forecast weather conditions.

**Data scientists** identify issues and use data to propose solutions for effective decision making.

They build algorithms and design experiments to merge, manage, interrogate and extract data to supply reports.

**A nurse prescriber** takes responsibility for assessment, diagnosis and the clinical management of a patient.

They are also responsible for prescribing and monitoring medications.
